## Posterior Predictive Check

Model−predicted lines should resemble observed data line

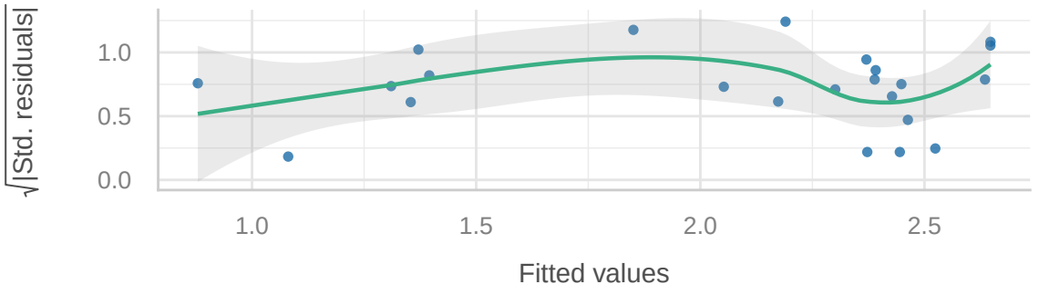

## Linearity

Reference line should be flat and horizontal

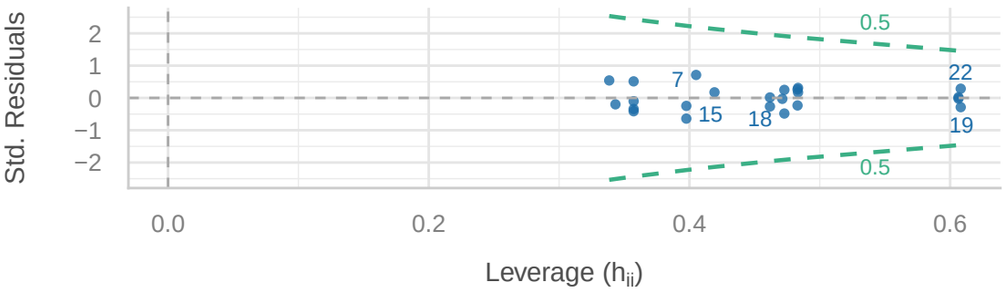

## Homogeneity of Variance

Reference line should be flat and horizontal

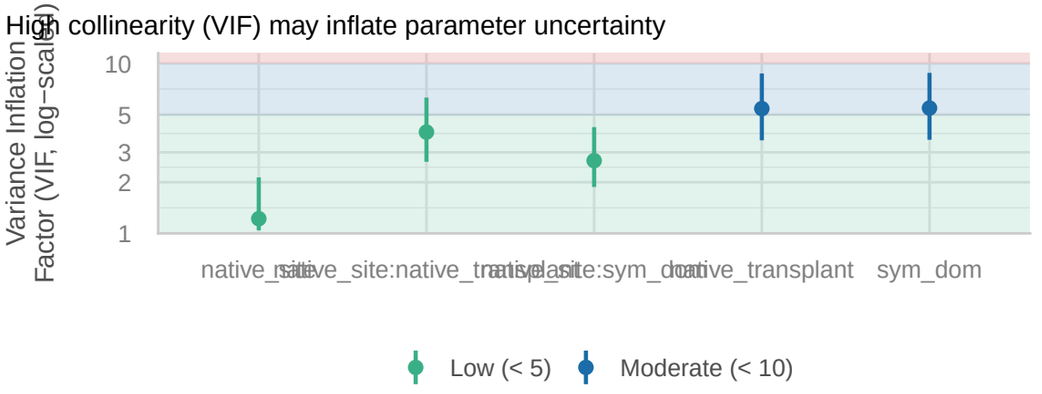

## Influential Observations

Points should be inside the contour lines

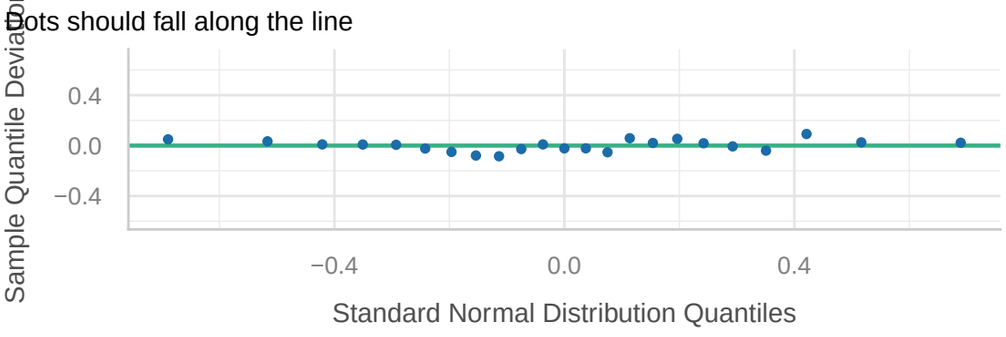

## Collinearity

High collinearity (VIF) may inflate parameter uncertainty

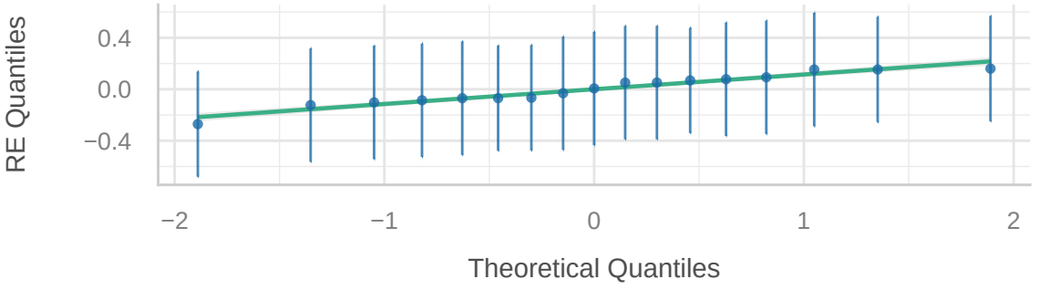

## Normality of Residuals

Dots should fall along the line

## Normality of Random Effects (parent:native_site)

Dots should be plotted along the line

## Normality of Random Effects (native_site)

Dots should be plotted along the line
